Summary

Vigilant **Cybersecurity & Digital Forensics** graduate from VIT Bhopal. Technically proficient in **Java** with a strong command of **Data Structures and Algorithms** applied to security automation. Passionate about identifying vulnerabilities and leveraging digital forensics to mitigate risks. Seeking to join a security team as a **Cybersecurity Analyst** to protect digital assets and solve complex architectural challenges.

Education

VIT Bhopal University, BTech in Computer Science Engineering	Aug 2022 – May 2026
• GPA: 8.90/10.0	
St. Conrad's Inter College, Agra	Apr 2020 – Mar 2022
• 12th: 85.75/100.0; 10th: 97.00/100.0	

Experience

The Red Users , Cybersecurity Intern – Remote	Apr 2025 – May 2025
• Executed comprehensive VAPT (Vulnerability Assessment and Penetration Testing) on web applications and network infrastructure using Burp Suite, Nmap, and Metasploit to identify and remediate critical security flaws.	
Srida IT Consulting and Services Pvt Ltd, Cybersecurity Intern – Remote	May 2025 – Jun 2025
• Orchestrated 6-phase cybersecurity projects, developing and implementing over 50 detection use cases to improve understanding and mitigation of system vulnerabilities.	
• Leveraged Splunk SIEM to monitor real-time network traffic and perform log analysis, identifying and triaging indicators of compromise to mitigate potential security incidents.	

Skills and Interests

Languages: Java, Python, SQL, C++

Cybersecurity: AES Encryption, Image Steganography, Privacy Protection, Nikto, Burp Suite, Metasploit, Nmap, Wireshark, Kali Linux, Google Dorking

Tools and Frameworks: BeautifulSoup, Nodemailer, Cron Jobs, EmailJS, Figma

Projects

Advanced Vulnerability Lab – Automated Security Auditing Environment (2026)	LINK
• Engineered a Docker-based security pipeline to automate web audits, identifying 15 critical vulnerabilities including Directory Indexing and EoL software. Built a custom Bridge Network (SDN) to bypass host-layer firewall restrictions, enabling isolated container-to-container traffic analysis.	
• Systematized the full lab lifecycle with Batch scripting, reducing environment deployment time to under 15 seconds.	
• Tech used: Docker, Nikto, Windows Batch, DVWA, Markdown	
Network Forensics & Exploit Analysis (2026)	LINK
• Simulated real-world cyberattacks (Reverse Shells, OS Fingerprinting) using Metasploit and Nmap within a virtualized lab environment.	
• Captured and analyzed malicious network traffic using Wireshark, identifying specific TCP/IP signatures and payloads associated with exploit execution. Performed deep packet inspection (DPI) to reconstruct attack sequences, mapping network anomalies to the MITRE ATT&CK framework.	
• Tech used: Wireshark, Metasploit, Nmap, Kali Linux, Networking Protocols.	

Certifications and Publications

IBM Cybersecurity Analyst Certification	Apr 2025
MERN Stack Development Certification	Apr 2025
Digital Arrest in India in i-manager's June Journal 2025	Jun 2025
