Summary

Vigilant **Cybersecurity & Digital Forensics** graduate from VIT Bhopal. Technically proficient in **Java** with a strong command of **Data Structures and Algorithms** applied to security automation. Passionate about identifying vulnerabilities and leveraging digital forensics to mitigate risks. Seeking to join a security team as a **Cybersecurity Analyst** to protect digital assets and solve complex architectural challenges.

Education

VIT Bhopal University , BTech in Computer Science Engineering	Aug 2022 – May 2026
• GPA: 8.90/10.0	
St. Conrad's Inter College , Agra	Apr 2020 – Mar 2022
• 12th: 85.75/100.0; 10th: 97.00/100.0	

Experience

The Red Users , Cybersecurity Intern – Remote	Apr 2025 – May 2025
• Executed comprehensive VAPT (Vulnerability Assessment and Penetration Testing) on web applications and network infrastructure using Burp Suite, Nmap, and Metasploit to identify and remediate critical security flaws.	
Srida IT Consulting and Services Pvt Ltd , Cybersecurity Intern – Remote	May 2025 – Jun 2025
• Orchestrated 6-phase cybersecurity projects, developing and implementing over 50 detection use cases to improve understanding and mitigation of system vulnerabilities.	
• Leveraged Splunk SIEM to monitor real-time network traffic and perform log analysis, identifying and triaging indicators of compromise to mitigate potential security incidents.	

Skills and Interests

Languages: Java, SQL, MongoDB, Express.js, ReactJS, NodeJS
Tools and Frameworks: BeautifulSoup, Nodemailer, Cron Jobs, EmailJS, Figma
Cybersecurity: Burp Suite, Metasploit, Nmap, Wireshark, Kali Linux, Google Dorking

Projects

Advanced Vulnerability Lab – Automated Security Auditing Environment (2026)	LINK
• Engineered a Docker-based security pipeline to automate web audits, identifying 15 critical vulnerabilities including Directory Indexing and EoL software. Built a custom Bridge Network (SDN) to bypass host-layer firewall restrictions, enabling isolated container-to-container traffic analysis.	
• Systematized the full lab lifecycle with Batch scripting, reducing environment deployment time to under 15 seconds.	
• Tech used: Docker, Nikto, Windows Batch, DVWA, Markdown	
Deepfake Detection Website (2025)	LINK
• Architected a full-stack web application for deepfake detection, using a machine learning model to verify digital media through image analysis with 90% accuracy on a test dataset of over 10,000 images, reducing manual verification time by over 85%.	
• Optimized model inference and front-end rendering to provide near real-time results, ensuring a seamless user experience while maintaining high computational efficiency for large media files.	
• Tech used: ReactJS, Machine Learning, Python	

Certifications and Publications

IBM Cybersecurity Analyst Certification	Apr 2025
MERN Stack Development Certification	Apr 2025
Digital Arrest in India in i-manager's June Journal 2025	Jun 2025
